

Tutorial: Mark items as Found in Raid

1- Find the ID of the item in your inventory you want to mark as found in Raid.

This great tutorial explains 4 different methods on how to do so

[\[1\]](#)

2- Go to your profile file and locate the item

Make sure the server is offline before applying any changes

This is a .json file you can find on your installation folder. The route will go something along these lines:

D:\SinglePlayerTarkov\user\profiles

Open said file with your notepad and find the item you want to mark. You can do so with a quick search (ctrl + F). In this example I want to mark a TerraGroup Labs access keycard. This is how it looks inside my .json file.

```
1  {
    "_id": "c7cabd8d55dff9b4c742e912",
    "_tpl": "5c94bbff86f7747ee735c08f",
    "parentId": "5fe49cdfa19cac3fa9054115",
    "slotId": "hideout",
    "location": {
        "x": 2,
        "y": 10,
        "r": "Horizontal",
        "isSearched": true
    },
    "upd": {
        "StackObjectsCount": 1
    }
}
```

3 - Add this line of code

Inside the "upd" section, press enter to create a new line of code and write "SpawnedInSession": true, notation, make sure you have both

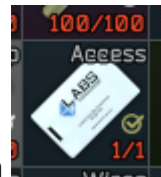

quote r

```
"_id": "c7cabd8d55dfff9b4c742e912",
"_tpl": "5c94bbff86f7747ee735c08f",
"parentId": "5fe49cdfa19cac3fa9054115",
"slotId": "hideout",
"location": {
  "x": 2,
  "y": 10,
  "z": "Horizontal",
  "isSearched": true
},
"upd": {
  "SpawnedInSession": true,
  "StackObjectsCount": 1
}
```

Result:

4 - Save the file

That's it 😊 Open your game and enjoy your found in raid item

Additional information

Technical knowledge
requirement

Beginner

Prerequisites

None.

However it will be easier if you have any notepad application.

Tutorial prerequisite list

I personally use Notepad++, a free source code editor which you can get [from here](#)
