

dlaa for tarkov

an alternative anti aliasing technology to taa that require rtx cards

[why taa is bad](#)

requirement

[dlsstools](#)

a.run EnableNvidiaSigOverride.reg

b. copy dlsstweaks.ini and nvngx.dll next to your eft.exe

c.open dlsstweaks with notepad and set

dlssqualitylevels = True

Balanced = 0.99

Quality = 0.99

dlss presets:

DLAA = F

Balanced = F

Quality = F

set your ingame dlss to quality or balanced to take effect

profit.

you could enable dlss hud for more information(OverrideDlssHud = 1)

sometimes when you are in a map the dlss will upscale the resolution to your native resolution, just go to the video settings and press apply(for people that dont play at their native/monitor resolution)
